

T-KEEPER

Developed to provide complementary and internal protection on any type of vehicle, **T-KEEPER** has been designed to significantly reduce the damage caused by IEDs and mines.

Composed of 2 distinct elements, a flexible anti-fragments mat made of **TENEXIUM** fabrics and an additional mat to absorb the dynamic effect caused by an explosive, The **T-KEEPER** is designed and adjusted to the vehicle's interior to provide optimal protection.

It thus allows to bring a complementary protection to the crews by ensuring or completing the existing protection capabilities.

Equipped with an anti-slip mat and a flexible, tear-proof envelope, the **T-KEEPER** is designed to withstand intensive operational use. (rot-proof, insensitive to water and waterproof, UV resistant, etc.)

The **T-KEEPER** is certified to hold FSP 1,1gr fragments (according to STANAG 2920) and fragments DM31 (according to AEP 55 Vol. 2) at a speed $> 600\text{m/s}$ for a mass per unit area of shielding of 15kg/m^2 (without the anti-blast mat).

Protection is also certified against the following types of attack:

- Hunting projectiles (EN1522 FSG / Brenneke)
- Handgun projectiles:
 - . EN1522 level FB4 (9 mm FMJ, 44 MAG)
 - . NIJ 0108-01 level 3A (9 mm FMJ, 44 MAG)

**MADE IN
FRANCE**
